

SWETHA KAMBHAMPATI

Bengaluru, India

+91-8951460897 — ks.kswetha09@gmail.com — [LinkedIn](#) — [GitHub](#)

Professional Summary

M.Tech Artificial Intelligence & Machine Learning student with 3+ years of industry experience at Wipro as an RPA Developer. Strong foundation in Machine Learning, Deep Learning, LLMs, and automation-driven AI solutions. Seeking roles in AI/ML, Data Analytics, Deep Learning, and Large Language Models.

Education

M.Tech – Artificial Intelligence & Machine Learning
VIT Vellore

2025 – Present
CGPA: 9.54

B.Tech – Electrical and Electronics Engineering
Acharya Institute of Technology, Bengaluru

2017 – 2021
CGPA: 7.9

Technical Skills

Programming Languages: Python, Java, SQL

ML & AI: Machine Learning, Deep Learning, NLP, Large Language Models (LLMs), Fine Tuning, Feature Engineering, Model Evaluation, Model Quantization

Deep Learning & CV: CNN, RNN, LSTM, YOLO (Object Detection), OCR

Libraries & Frameworks: TensorFlow, PyTorch, Keras, Hugging Face (Transformers), Pandas, NumPy, Scikit-learn

Data & BI: Power BI, Excel, SQL Database, Apache Spark (academic), Databricks, Pentaho, Predictive Analysis, Streamlit

Automation & Platforms: Power Automate, Power Apps, UiPath Orchestrator, AI Builder

Deployment & Integration: REST APIs, Edge Intelligence, Docker, Kubernetes

Tools: Jupyter Notebook, SQLite, ServiceNow, ABBYY FlexiCapture

Work Experience

Project Engineer

Sept 2021 – Oct 2024

Wipro, Bengaluru

- Designed and deployed enterprise automation workflows using Power Automate and Power Apps, reducing manual processing time by approximately 30%.
- Built and maintained RPA solutions for data processing, reporting, and cross-system integrations, improving operational efficiency and processing speed.
- Collaborated with 4 cross-functional teams to translate business requirements into scalable automation solutions.
- Managed end-to-end lifecycle including requirement gathering, development, testing, deployment, monitoring, incident resolution, and SQL-based data validation.

Projects

- Software Requirement Classification using LLM Fine-Tuning**
Developed an NLP pipeline for software requirement classification using LLM embeddings and transformer fine-tuning. Implemented baseline prompting with Gemini, classification heads (SVM, Random Forest, Decision Tree), and fine-tuned Mistral-7B using LoRA, achieving 20% performance improvement over the baseline.
- Label Uncertainty Handling in Autonomous Driving using GenAI and XAI (Ongoing)**
Developing a deep learning framework to address noisy and ambiguous labels in autonomous driving perception tasks using CNN-based models and explainable AI techniques for robustness and label refinement.
- Cross-View Maize Disease Detection and Severity Estimation using Deep Learning (Ongoing)**
Developing a deep learning computer vision pipeline for crop disease detection using PyTorch, integrating classification, lesion detection, and lesion-count-based severity estimation. Studying cross-view generalization from leaf-level imagery to canopy-level (boom) agricultural monitoring images.
- Stock Market Prediction and Forecasting**
Implemented ARIMA and machine learning models for financial time-series forecasting with data preprocessing, stationarity analysis, and performance evaluation, achieving improved forecasting accuracy over baseline approaches.

Certifications

- PG Level Certification in Business Analytics**, Indian Institute of Science (IISc) Aug 2024 – Jul 2025
- IBM RAG and Agentic AI Professional Certificate** Ongoing
